EDUCATION

Shanghai University of Finance and Economics

Shanghai, China

BSc. of Management, Electronic Business | GPA: 3.7/4.0 (Top 6%)

Sept 2020 – July 2024

- **Honors:** Secondary Prize of People's Scholarship(6%); Outstanding Student(3%)
- **Relevant Coursework:** Programming(C++), Advanced Programming, Data Structure, Database (SQL Language), Python, Information System Management

University of California, Berkeley

Berkeley, CA

Visiting Student, Computer Science & Data Science | GPA: 4.0/4.0

Aug 2022 – Dec 2022

- **Relevant Coursework:** Data Structure(Java Programming), Principles & Techniques of Data Science(Pandas, Scikit-learn), Economic Models

PROFESSIONAL EXPERIENCE

FNZ

Shanghai, China

Software Engineer(Full Stack)

Aug 2024 – Present

- Built scalable online trading service for fintech platforms with the .NET framework and ensured system reliability. Responsible for both front-end (React) and back-end (C#) work.
- Developed underlying database schema and queries with Microsoft SQL Server. Optimized database schema, indexing strategies, and existing queries based on execution plans and I/O statistics.
- Experienced in complex technical items such as data restoration, code migration, Web Page performance issues, anon script design etc...
- Familiar with agile development processes, methodologies, and development tools such as Confluence Page, Wiki Jira, and Azure DevOps.

Software Tester Engineer

Aug 2024 – Nov 2024

- Analyzed client requirements from financial institutions and designed front-end and back-end solutions for fund products. Provided functional finance-related knowledge to developers to enhance project execution.
- Developed and executed test cases for multiple core functions, utilizing test automation tools like SoapUI and performance testing with JMeter. Managed release processes and conducted thorough test plan reviews to ensure high-quality deliverables.

Eaton

Shanghai, China

Software Engineer Intern(Full Stack)

Jan 2024 – May 2024

- **BLSS Sizing Project:** Participated in the design and development of a web application aimed at assisting company sales by automatically generating client reports through form submission or direct Excel file uploads. Utilized React framework and Material UI component library for frontend development, while backend logic was implemented using Go language, Gin framework, and Excelize package for data processing and report generation. Managed user login states using Redis and stored user and report information in MySQL.
- Utilized Agile development methodology within the company, demonstrating proficiency in using the Azure DevOps platform for project management. Skilled in collaborative development and code review using Git for version control.

Goldman Sachs

Shanghai, China

Ops Engineering Intern

Aug 2023 – Dec 2023

- Designed data pipelines using Alteryx, automating the generation of regulatory reports upon receiving new data each week, which significantly reduced manual reporting time and ensured the accuracy of the reports.
- Constructed an information system to manage and electronically archive paper documents efficiently, which facilitated document management while meeting regulatory compliance standards set by the CSRC.
- Developed an interactive Excel VBA tool for colleagues to streamline the process of annotating, highlighting, and processing specific cells in spreadsheets, which enabled efficient and accurate report preparation by simplifying the task through a question-and-answer interface.

Invista(Koch Company)

Shanghai, China

IT Intern

Feb 2023 – May 2023

- Independently developed approval software for the operations and finance departments using tools like Power App and Power Automate. Streamlined approval processes, enabling product digital transformation.
- Provided crucial technical support for process automation across various departments, resolving RPA (Robotic Process Automation) issues and code design challenges, successfully accomplishing 12 related projects.
- Collaborated with the project supervisor to implement SeeQ (manufacturing advanced data analysis software) for real-time automatic monitoring and automatic report generation, estimated to save \$2,000 annually in labor costs.
